

Five Important Factors That Affect Crescent Visibility

#1 - Moon Age

The time that has passed since the birth of the moon.

The older the moon, the more visible it is.

IDEALLY VISIBLE AT: 18 hours old

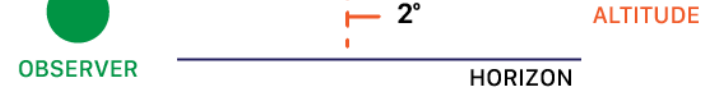

#2 - Altitude

The height of the moon above the horizon.

The higher the moon, the more visible it is.

IDEALLY VISIBLE AT:

10 degrees

#3 - Lag Time

The time between sunset and moonset.

The moon is above the horizon during this time.

IDEALLY VISIBLE AT: 45 minutes

#4 - Weather

Sky conditions affect moon visibility.

IDEALLY VISIBLE WHEN:

the Western horizon is clear

#5 - Actual Sighters

If all the above four factors are positive, but no one goes out to sight, the moon can never be seen!
